

IN THE CLAIMS

Please amend the claims as follows:

1. (Currently Amended) A vehicle for traveling along a conduit having fluid flowing therein, the vehicle comprising:

at least one first body portion;

a plurality of first retractable resilient members mounted to said body portion and adapted to engage an internal wall of a conduit such that said first resilient members resist movement of the apparatus along a conduit in a first direction more than in a second direction opposite to said first direction;

a plurality of second retractable resilient members mounted to said body portion and adapted to engage the internal wall of the conduit such that said second resilient members resist movement of the apparatus along the conduit in said second direction more than in said first direction;

at least one second body portion having a respective plurality of third resilient members adapted to engage the internal wall of the conduit such that said third resilient members resist movement of the second body portion relative to the conduit in one of said first or second direction more than in the other of said first or second direction; and

at least one moving device ~~means~~ for moving said first body portion and the or each said second body portion towards and away from each other;

wherein said first and second resilient members are stiffer than said third resilient members.

2. (Original) A vehicle according to claim 1, wherein a plurality of said first and/or second and/or third resilient members are bristles.

3. (Currently Amended) A vehicle according to claim 1 ~~or~~ 2, further comprising at least one cam ~~means~~ provided on said first body portion for retracting said first and/or second resilient members.

4. (Currently Amended) A vehicle according to claim 3 wherein at least one said cam ~~means~~ comprises at least one first support ~~means~~ for a plurality of said first resilient members, at least one second support ~~means~~ for a plurality of said second resilient members, and at least one displacement device ~~means~~ for causing radial displacement of the or each said first and/or second support ~~means~~ relative to said first body portion.

5. (Currently Amended) A vehicle according to claim 4, wherein at least one said displacement device ~~means~~ comprises at least one displacement member axially moveable relative to the first body portion and having a respective mating surface for engaging a corresponding surface on at least one said first and/or second support ~~means~~ such that movement of the or each said displacement member causes radial displacement of the or each said first or second support ~~means~~.

6. (Original) A vehicle according to claim 5, wherein at least one said displacement member is axially displaceable relative to the first body portion.

7. (Currently Amended) A vehicle according to claim 5 ~~or~~ 6, wherein at least one said displacement member is rotatable relative to the first body portion.

8. (Currently Amended) A vehicle according to ~~any one of the preceding claims~~ claim 1, wherein at least one said second body portion is slidably mounted to a shaft connected to said first body portion.

9. (Currently Amended) A vehicle according to claim 8 wherein at least

one said moving device means comprises at least one screw thread on said shaft and at least one rotating device means for rotating the shaft relative to at least one said second body portion.

10. (Currently Amended) A vehicle according to ~~any one of the preceding claims~~ claim 1, further comprising at least one drive apparatus means for operating the or each said moving device means.

11. (Currently Amended) A vehicle according to claim 10, wherein at least one said ~~the~~ drive apparatus means has at least one shaft portion adapted to be rotated by the fluid flow.

12. (Currently Amended) A vehicle according to claims 10 ~~or 11~~, wherein at least one said ~~the~~ drive apparatus means is electrically operated.

13. (Currently Amended) A vehicle according to ~~claims claim 11 and 12~~, wherein at least one said ~~the~~ drive apparatus means is rechargeable through rotation of at least one said shaft portion.

14. (Currently Amended) A vehicle according to ~~any one of the preceding claims~~ claim 1, further comprising at least one deployable device means for increasing fluid drag on the vehicle.

15. (Currently Amended) A vehicle according to claim 14, wherein at least one said ~~the~~ deployable device means is a parachute.

16. (Cancelled)
